 This opinion has been established on the basis of a translation from the original language into the following language \_\_\_\_\_, which is the language of a translation furnished for the purposes of international search (under Rule 12.3 and 23.1(b)).
2. With regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:
  - a. type of material  
 a sequence listing  
 table(s) related to the sequence listing
  - b. format of material  
 in written format  
 in computer readable form
  - c. time of filing/furnishing  
 contained in the international application as filed.  
 filed together with the international application in computer readable form.  
 furnished subsequently to this Authority for the purposes of search.
3.  In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

**1. Statement**

Novelty (N)	Claims	1-11	YES
	Claims		NO
Inventive step (IS)	Claims		YES
	Claims	1-11	NO
Industrial applicability (IA)	Claims	1-11	YES
	Claims		NO

**2. Citations and explanations:**

Claim 1 does not appear to involve an inventive step because a lens sheet for screen using a thermoplastic resin made of the materials such as butadiene, styrene, and meta acrylate is described in [JP 2000-66307 A (Mitsubishi Rayon Co., Ltd.)] cited in the ISR, and similarly because the necessity of carrying out universal hardness testing, determining a rate of elastic deformation, and achieving an optimal hardness restoration capability at low temperatures is described in JP 2001-228549 A (DAINIPPON PRINTING CO., LTD.) cited in the ISR.

Furthermore, claims 2 and 3 do not appear to involve an inventive step because determining a preferable range by determining a compressive elasticity modulus, a maximum amount of deformation, and a loss tangent is described in JP 2003-84101 A (DAINIPPON PRINTING CO., LTD.) cited in the ISR in addition to the aforementioned documents.

Furthermore, claim 4 does not appear to involve an inventive step because inhibiting undesirable warping by limiting a rate of water absorption is described in JP 11-72848 A (DAINIPPON PRINTING CO., LTD.) cited in the ISR in addition to the aforementioned documents.

Furthermore, claims 5-11 do not appear to involve an inventive step because varying the rate of water absorption of each layer in turn in a lens sheet for screen made of two or more layers is described in JP 2000-47329 A (TOPPAN PRINTING CO., LTD.) cited in the ISR in addition to the aforementioned documents.
